Acknowledgments

Many within the American Medical Association contributed generously to the success of this publication. The authors wish to thank Norbert W. Budde, Ph.D., Director of the Division of Survey and Data Resources, for his efforts in making this project possible and for assuring the availability of resources necessary for successful completion. The consultation of Gene Roback, Director of the Department of Data Release Services, and her authentication of the 1980 Year-End Historic Physician Masterfile are gratefully acknowledged.

Eduardo Vallejos and Raymond Healy from the Division of Computer and Information Services provided the programming expertise needed to complete this project. In addition, the contributions of Larry Sepin and Beverly Martin for their Marketing Communications Plan, of Leona Frack and Herbert Hinkelman for art and layout, and of Sharon Henderson for editorial comments are also acknowledged.

Foreword

To respond to the changing information needs of health care providers and researchers, the 1981 Edition of PHYSICIAN CHARACTERISTICS AND DISTRIBUTION IN THE U.S. is replacing PHYSICIAN DISTRIBUTION AND MEDICAL LICENSURE IN THE U.S. As in previous publications, PHYSICIAN CHARACTERISTICS AND DISTRIBUTION IN THE U.S. provides useful information on the geographic distribution of doctors of medicine (M.D.'s) in the United States and Possessions. Separate summary tabulations are provided for women and foreign medical graduate physicians. These physician data provide the basis of comparison essential for health manpower planning and serve as guides for comparing regions, divisions, states and counties with respect to physician distribution by specialty and activity.

This edition of PHYSICIAN CHARACTERISTICS AND DISTRIBUTION IN THE U.S., the latest in a series begun in 1963 as the Distribution of Physicians, includes new tables which show such characteristics of the physician population as age, sex, board certification and country of graduation. Trend data highlighting physician characteristics and distribution from 1970-1980 are also included in this publication. These changes are made to meet the needs of researchers and the medical community as demonstrated by individual requests received by the Department of Data Release Services.

Norbert W. Budde, Ph.D., Director
Division of Survey and Data Resources

Since 1906, the AMA has been a source of information on the location, specialty and professional activities of doctors of medicine. Through time, the breadth and quality of the data collected has expanded to meet emerging needs. Currently, the data are gathered from physicians and approximately 2,100 medical organizations and institutions. The Association appreciates the cooperation of physicians who respond to the Record of Physicians' Professional Activities Survey and the organizations and institutions who provide data on an ongoing basis.

The AMA Physician Masterfile from which the data are drawn is the most comprehensive source of data on United States physicians and their medical practice characteristics. It is a major AMA resource of use to the entire medical community. Although this publication was designed to meet many of the anticipated data needs, a mechanism has also been established to repond to specific requests for information from the AMA Physician Masterfile. Inquiries regarding data contained in this publication or earlier publications should be directed to the Division of Library and Archival Services, American Medical Association. Inquiries concerning AMA Physician Masterfile data not contained in this publication should be directed to the Department of Data Release Services, American Medical Association.

AMA Physician Masterfile

The AMA Physician Masterfile is the most comprehensive and complete source of physician data in the United States. It includes information on every physician in the U.S. and on those graduates of American medical schools who are temporarily practicing overseas. The file includes members and non-members of the Association and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, the total U.S. physician population is included on the AMA Physician Masterfile.

A file is started on each individual upon entry into medical school or, in the case of foreign or Canadian medical graduates, upon entry into the U.S. As a physician's training and career develop, additional information is added to the file, e.g., internship and residency training, licensure, board certification, professional affiliations, and other characteristics. This information is included in the historical portion of the Masterfile. In addition, the current professional activities portion of each physician's record identifies current address, professional activity, specialties, and employment status. By definition, this current portion of the file is subject to constant change and must be updated continually through intensive monitoring and data collection activities.

A mail questionnaire survey, the Record of Physicians' Professional Activities (PPA), has been sent every four years since 1969 to all U.S. physicians to collect information on their current professional activities. Each physician is asked to indicate the number of hours worked per typical week within the following categories:

Professional Activities–hours spent in direct patient care or non-patient care activities (i.e., medical teaching, administration, medical research, other)

Specialization– hours spent in primary, secondary, tertiary specialties

Present Employment– hours spent by type of employer (i.e., solo practice, partnership, group, non-group arrangement, medical school, non-governmental hospital, governmental hospital).

All returned questionnaires are passed through a series of clerical and computer-editing procedures which assign major professional activity classifications to each physician's record on the basis of the hourly information provided. The most recent PPA Census was completed in January, 1982, with a response rate of approximately 90 percent. The questionnaire is shown in Exhibit A.

Between census years, a computerized weekly update system keeps the Masterfile current. Each physician's record is dated to reflect the most recent change in address, specialty, or professional activity. Sources of information indicating changes include AMA mailings or publications, addressing company mailings, physician correspondence, hospitals, government agencies, medical societies, specialty boards, or licensing agencies. Depending upon the source of information and the type of change, a questionnaire may be sent to the physician to verify the change.

While the data collected from the Record of Physicians' Professional Activities questionnaire represent a major source of information to the Physician Masterfile, data from other sources are also incorporated (Exhibit B). Information collected from these sources includes;

- MEDICAL SCHOOLS—name, address, birthdate, birthplace, school and year of graduation
- HOSPITALS—physicians in graduate medical training including foreign medical graduates (FMG's) entering U.S. training
- MEDICAL SOCIETIES—address and membership information
- NATIONAL BOARDS—medical students and physicians who have passed all parts of the National Board Examination
- STATE LICENSING AGENCIES—licensure status of physicians
- EDUCATIONAL COMMISSION FOR FOREIGN MEDICAL GRADUATES (ECFMG)—FMG's who have been certified by the ECFMG
- SURGEONS GENERAL OF THE U.S. GOVERNMENT—physicians in government service
- AMERICAN BOARD OF MEDICAL SPECIALTIES—physicians certified by American Specialty Boards

The AMA Physician Masterfile utilizes data from primary sources only; information is not entered on the Masterfile unless submitted or verified by a primary source. While many sources provide data for inclusion on the Masterfile, data are also often extracted from the Masterfile for use by these agencies. In addition, the file is used by various state and county medical specialty societies, the pharmaceutical industry, publishers, and eight addressing companies.

AMA data are available for research and other special purposes. Safeguards to protect the confidentiality of these data and the AMA's proprietary rights have been mandated by the AMA's Board of Trustees. Inquiries concerning the release of data should be directed to the Department of Data Release Services, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Dear Doctor,

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the 28th Edition of the AMERICAN MEDICAL DIRECTORY. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, NO information from your record will be released to any organization for the purpose of developing independent physician data files. Thank you.

Instructions

1. Please answer every question on the basis of your *current* activities.
2. *Indicate any changes.* Information which you provided previously has been printed in this form.
3. *Please check your mailing address* printed in the top left corner of this form. Changes to your preferred professional mailing address (i.e., the address at which you wish to receive medically-related materials including drugs, other samples, and printed material) should be made in the space provided.
4. Upon completion, return the questionnaire at your *earliest possible convenience,* using the preaddressed envelope.

Abbreviations and Data Collection

Sources of Information

Today the AMA is the most complete source of physician information in the United States. The Association maintains records containing both current and historical data on more than 467,000 physicians. Refer to the section entitled "AMA Physician Masterfile" for a complete description of AMA's data collection activities.

All summary and detail data on physicians (M.D.'s) presented in this publication have been compiled as of December 31, 1980, from the AMA Physician Masterfile maintained by the Division of Survey and Data Resources.

Physician Characteristics—1980

Introduction

This section provides detailed information on several characteristics of the physician population in the United States. Data contained in this section provide an overview of the characteristics of the entire U.S. physician population by major professional activity, primary specialty, federal employment status, age, sex, country of graduation and board certification status of all Doctors of Medicine (M.D.).

Major Professional Activity

Major professional activity classifications are based on the number of hours spent in various professional activities. Direct patient care activities include office-based practice and hospital-based practice which comprises physicians in residency training (all years) and full-time members of hospital staffs. Non-patient care activities include administration, medical teaching, medical research, and other activities. Physicians who are either retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons are classified as inactive. Physicians are categorized as not classified if the AMA has not received any recent information as to their type of practice and present employment. Physicians for whom valid addresses are not available are excluded from most tables since current specialty and activity data are not readily attainable.

Primary Specialty

A physician's primary specialty is defined as that discipline (within those recognized by the AMA) in which the largest number of professional hours are reported by the physician. The rapidly expanding specialties of Family Practice and Emergency Medicine (generally considered sub-specialties) have been given increased attention in recent years by the medical research field and, due to their recognized status as certifiable specialities, are included in Tables H-N.

Federal and Non-Federal Employment

Designations of federal and non-federal employment are used in all of the tables found in this publication. Federal status is defined as full-time employment by the federal government, including the Veteran's Administration, military services, the U.S. Public Health Service and other federally funded agencies. Primary consideration for data in this publication is given to the presentation of detailed information for non-federal physicians.

Other Physician Characteristics

Board certification by one or more of the 23 American Specialty Boards is a voluntary effort on the part of the physician. These boards require a rigid series of requirements for certification, including examination and successful completion of an approved residency training program. Though the attainment of certification demonstrates proficiency within a chosen discipline, the absence of certification status cannot be presumed to imply the converse. The number of physicians holding certificates is presented in two ways: Tables H through M present the total number of physicians holding one or more board certificates regardless of whether the issuing board corresponds to the physician's primary specialty; Table N presents the number of physicians who are certified by the board corresponding to their primary specialty. Physician distribution by age is presented in this section using the following intervals: under 35 years, 35 to 44 years, 45 to 54 years, 55 to 64 years, 65 to 74 years and 75 years and over. These groupings have been selected after analysis of the most meaningful and frequently requested intervals from independent research requests to the AMA.

The thirty countries presented in Table N represent those countries with the largest number of medical school graduates in the U.S. as of December 31, 1980. These data represent only the physician's country of graduation and do not reflect the birth or citizenship status of the physician. Thus, these tables also include U.S.-native physicians who received their education outside the United States as well as foreign nationals educated outside the U.S. who may have achieved naturalized status since entering the U.S.

Trends in Specialty and Major Professional Activity of Federal and Non-Federal Physicians

Tables A and B show the distribution of physicians by major professional activity and primary specialty from 1970-1980. As reflected on these tables, the total number of physicians has continued to increase throughout the decade.

Over the last ten years, the number of physicians classified in patient care continues to increase faster than the number of physicians in other professional activities (Table A). While the total number of physicians has increased by 133,651 since 1970 (40.1 %), the number of physicians indicating General Practice as a primary specialty has increased by only 2,101 (3.6 %) (Table B).

Trends in Age and Specialty of Women Physicians

Table C shows the number of women physicians in the United States and Possessions by age for 1970, 1975 and 1980. As shown, women physicians are,on the average, younger than their male counterparts. In 1970, 33.3 percent of the women physicians were under the age of 35. By 1980, the proportion of women physicians under the age of 35 has increased to 42.4 percent.

Table D provides a comparision between 1975 and 1980 for all federal and nonfederal women physicians by specialty category. Over this five year period, the total number of women physicians has increased by over 18,000. Within specialty categories, the greatest increases were realized in Internal Medicine (97.0%), Surgery (93.8%), and Radiology (73.2%).

Trends in Specialty and Major Professional Activity of Foreign Medical Graduate Physicians

The distribution of Foreign Medical Graduate (FMG) physicians by major professional activity and specialty from 1970-1980 is shown in Tables E and F. The decreased number of FMGs now entering residency training programs in the U.S. is reflected in Table E. The significant decline over the last decade (31.3%) is the result of the stringent entrance requirements mandated by the 1976 Health Professions Educational Assistance Act (PL 94-484). FMGs wishing to enter the United States for graduate medical education may be required to pass the Visa Qualifying Examination and to meet other special requirements.

Since 1970, the number of foreign medical graduates in the United States has risen by 40,509, an increase of over 70 percent (Table F). The number of foreign medical graduates in this country who indicate general practice has risen nearly 36 percent to over 9,100 physicians. In contrast, the net increase in general practitioners for the entire physician population is only 3.6 percent (Table B).

Comparison of the Number of Board Certifications Held by Non-Federal Physicians by Specialty

The data presented in Table G indicate the trend toward increased board certification. Between 1975 and 1980 the number of non-federal physicians has increased by over 23 percent, the number of physicians who hold one board certificate has increased by over 47 percent, and the number of physicians who hold multiple boards has increased by over 63 percent.

Although the absolute number is small, the specialty fields which show large percentage increases in the numbers of boards held are General Practice/Family Practice, Diagnostic Radiology, Pulmonary Diseases and the general category of "other specialties." The largest absolute increase of physicians who have indicated a specialty in General Practice or Family Practice has only increased by 11.3 percent since 1975 yet the numbers of physicians who hold either one board or two or more boards has increased by 156 and 402 percent respectively. The category of "other specialty" contains some 6,216 physicians in Emergency Medicine thus contributing to the growth of the larger category.

Federal and Non-Federal Physicians by Specialty, Age, Board Certification and Sex

Tables H through M show physicians by age, sex, specialty and number of specialty boards held. Tables H through J provide this information for both federal and non-federal physicians while Tables K, L and M provide these data only for non-federal physicians. Physicians whose addresses are unknown have been excluded from the totals in all six tables.

Of the non-federal physicians, 51.3 percent are board certified (Table K). Of the male physicians, 53.7 percent hold at least one board certification (Table L) while only 32.6 percent of the women physicians are board certified (Table M). The majority of women physicians (70%) are 44 years and younger while only 50 percent of the male physician population fall into this age interval.

Federal and Non-Federal Physicians by Specialty and Corresponding Board Certification

Table N compares specialty and corresponding board certification for federal and non-federal physicians.

Over 43 percent of the federal and non-federal physicians are certified by the board corresponding to their primary specialty. Of these, 193,211 physicians are certified by the specific board corresponding to their primary specialty only while an additional 9,204 are certified in an additional specialty. The greatest proportion of physicians certified by their primary specialty are the physicians in Gastroenterology (75.5%), Pathology (72.5%), and Dermatology (69.3%).

Foreign Medical Graduates by Activity Within Primary and Non-primary Care Specialties for Thirty Selected Countries

Table O presents a brief profile of Foreign Medical Graduates in the U.S. by country of graduation, specialty, primary care versus non-primary care, and professional activity (patient care/non-patient care). The thirty countries included in this table are those with the largest number of physicians in the U.S. practicing medicine.

Thirty-four percent of FMGs specialize in primary care. The largest single contributors of FMGs in the U.S. are India (15,032) and the Philippines (12,613) which represent 28.3 percent of the total.

Physician Distribution—1980

Summary Statistics

The distribution of the 414,916 professionally active physicians with *known addresses* in the United States and Possessions is described in this section. The data are presented under two main categories—"federal physicians" and "non-federal physicians". Excluded from summary tables P, Q and R are 25,744 inactive physicians, 20,629 unclassified physicians and 6,390 physicians whose address is unknown. The 6,755 non-federal physicians who are temporarily in foreign locations are not considered part of the currently active physician population in the U.S. and, therefore, are excluded from all tabulations.

The majority (90.7%) of the 414,916 active physicians are classified in "patient care" (Table P). The remaining 9.3% of the total physician population is divided among "administration", "medical teaching", "research", and "other". A larger percentage of non-federal (91.1%) physicians are classified in "patient care" than federal physicians (82.1%)

Table P shows that *one out of twenty-three* active physicians (4.3%) are in federal service. Compared to non-federal physicians a larger proportion of federal physicians are involved in "teaching" (7.1%), "administration" (11.2%), "research" (7.0%), and "other" (6.4%), than those in "patient care" (3.9%).

Effective in 1975, the first year of graduate medical education (internship)* was integrated with all subsequent years of residency training. The activity category "Residents—All Years" presented in this publication reflects this change in designation.

Federal Physicians

Table Q shows the distribution of federal physicians by census region, division and activity. A plurality of the 17,787 physicians in federal service are located in the South Region (43.4%) and particularly in the South Atlantic Division. (Table Q shows that this concentration is most pronounced for "administration" and "research".) A large percentage (22.7%) of the federal physicians teaching in medical schools are located in the Pacific Census Division.

Non-Federal Physicians

The distribution of active non-federal physicians varies from region to region (Table R). Southern states account for a greater percentage of the total physician population (28.7%) including those in "patient care" (28.8%) and in "medical teaching" (32.2%) than any other region. However, the Northeast Census Region had the greatest percentage of non-federal physicians in "administration", "research", and "other" categories, than the other regions.

Metropolitan Statistics

This section provides information on the distribution of 385,365 non-federal physicians in the metropolitan areas of the United States. Included are data on 267 Standard Metropolitan Statistical Areas (SMSA's) and 33 "Potential" SMSA's (SMSA's are defined in the next section). The 300 metropolitan areas contain 86.9% of the total non-federal physicians in the United States and Possessions (Table S). About the same percentage (86.4%) of those in "patient care" are located in these areas. Medical, surgical, and other specialists located in metropolitan areas constitute a larger percentage than general practice. The large proportion (92.4%) of the "hospital-based" physicians in SMSA's reflect the clustering of interns and residents, as well as staff in the large metropolitan hospitals. Metropolitan areas also have a high percentage (94.3%) of physicians in "other professional activity" reflecting a similar concentration of medical schools and pharmaceutical companies.

There are many factors that contribute to the increasing trend toward urban living; not all of them are reflected in these data. As the trend continues, greater emphasis will be placed on the collection of information on metropolitan areas.

SMSA Definition

A Standard Metropolitan Statistical Area (SMSA) is broadly defined as having either: (1) one city of 50,000 or more inhabitants; or (2) one city with at least 25,000 inhabitants, which, when combined with contiguous places having a density of 1,000 or more people per square mile, will have a population of at least 50,000. This *broad* definition reflects the revised criteria by the federal government's Office of Statistical Policy and Standards (OFSPS).

The SMSA compositions used in this volume are those of Sales and Marketing Management. The title of each SMSA is the name of the largest city or the first-mentioned of a compound name. Those SMSA's which are located in more than one state are designated by the state containing the largest city in that particular SMSA.

The 33 "Potential" SMSA's are designated by asterisks in Table 14. Potential SMSA's are so designated since they do not meet all the requirements of the government (OFSPS), but are considered prime candidates to achieve SMSA status in the near future.

Demographic County Classification

The former "County Group Classification" of five groups was revised in 1967 to include nine categories, and was renamed the "Demographic County Classification." Any equivalent conversions of the previously used county groups to the present classification is impossible on a one-to-one basis because of the criteria on which each classification was based.

Demographic County Classifications are listed in the section entitled "Abbreviations and Data Collection" and appear in Tables 10 and 11. The Standard Metropolitan Statistical Areas which are utilized in categories 6 through 9 are Sales and Marketing Management's SMSA definitions of the metropolitan area concept established by the United States Bureau of the Budget. Sales and Marketing Management and the Bureau of the Budget use identical SMSA definitions except for a few instances in New England where the former uses the county unit rather than the township as the geographic boundary.

The group 5 county classification contains 33 "Potential SMSA's" which, as defined by Sales and Marketing Management, are considered future candidates for SMSA status. Demographic county classifications 1 through 4 are non-metropolitan areas.

The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Chesapeake, Virginia; and Richmond, Virginia are treated as individual counties. All other independent cities, largely those in Virginia, were incorporated into the county which encompasses it. In addition, Muscogee County, GA., is listed as Muscogee, however it is frequently referred to as Columbus County; Carson City, Nevada is Ormsby County; Park County, Wyoming is listed as Park but is combined with Yellowstone National; Princess Anne County in Virginia is referred to as Virginia Beach City; Kalawao County in Hawaii is combined with Maui County; and Alaska is divided into four Judicial Divisions:

- 1st Judicial Division:
  Angoon, Haines, Juneau, Ketchikan, Outer Ketchikan, Prince of Wales, Wrangell-Petersburg, Sitka, Skagway Yakutat, Yukon Koyukok
- 2nd Judicial Division:
  Kobuk, Nome, Wade Hampton
- 3rd Judicial Division:
  Aleutian Islands, Anchorage, Barrow, Bristol Bay, Bristol Bay Burrough, Cordova-McCarthy, Kenai-Cook, Kodiak, Matanuska, Seward, Valdez-Chitina
- 4th Judicial Division:
  Bethel, Fairbanks, Kuskokwim, SE Fairbanks, Upper Yukon

Women Physicians — 1980

Summary Statistics

The distribution of 44,706 professionally *active* women physicians with *known addresses* in the United States and Possessions are described in this section. Data are presented under two main categories—"federal women physicians" and "non-federal women physicians". Those who are inactive, with unknown addresses, and 4,030 unclassified women physicians are omitted from all summary tables. The 707 non-federal women physicians who are temporarily in foreign locations are not considered part of the active physician population in the U.S. and are, therefore, excluded from all tabulations.

The majority (89.4%) of the 44,706 active women physicians are classified in "patient care" (Table U). The remaining 10.6% of this population is divided among "administration", "medical teaching", "research", and "other". A slightly larger percentage of non-federal (89.5%) physicians are classified in "patient care" than federal physicians (86.5%).

Table U shows that *one out of twenty-six* women physicians (3.8%) is in federal service.

Federal Women Physicians

Compared to non-federal women physicians, relatively more of the 1,695 women physicians in federal service are located in the South Region (39.4%) and particularly in the South Atlantic Division which includes Washington, D.C. Table V shows this concentration of federal women physicians (86.5%) in "patient care".

Non-Federal Women Physicians

The distribution of active non-federal women physicians varies from region to region (Table W). Northeastern states account for a greater percentage of the total female population for each professional activity classification than any other region. This results from grouping three heavily populated states, New York, New Jersey, and Pennsylvania, into one division.

Foreign Medical Graduate Physicians — 1980

Summary Statistics

The distribution of the 81,591 professionally active Foreign Medical Graduate (FMG) physicians with *known addresses* in the United States and Possessions are described in this section. Canadian medical graduates are *not* included in these tabulations. The data are presented under two main categories—"federal FMG physicians" and "non-federal FMG physicians". Those who are inactive, with unknown addresses, and 10,235 not classified physicians are omitted from all summary tables. The 2,902 non-federal FMGs who are temporarily in foreign locations are not considered part of the physician population in the U.S. and are excluded from all tabulations.

The majority (89.4%) of the 81, 591 active FMGs are classified in "patient care" (Table X). The remaining 10.6% of this total FMG physician population is divided among "administration", "medical teaching", "research", and "other". Approximately the same percentage of non-federal FMG physicians (89.4%) as federal FMG physicians (89.5%) are classified in "patient care". Table X shows that *one out of twenty-one* active FMGs (4.6%) is in federal service.

Federal FMG Physicians

Compared to non-federal FMG physicians, relatively more of the 3,748 FMG physicians in federal service are located in the South Region (33.5%) and particularly in the South Atlantic Division, which includes Washington, D.C. Table Y show that almost 90% of the federal FMG physicians are engaged in patient care activities.

Non-Federal FMG Physicians

The distribution of active non-federal physicians varies from region to region (Table Z). Northeastern states account for a greater percentage of the total FMG population (37.3%) including those in "patient care" (37.0%) as well as all other professional activities than any other region. This results from grouping three heavily populated states, New York, New Jersey and Pennsylvania, into one division.
